

Rogaine®

TOPICAL SOLUTION minoxidil 2%

INDICATIONS AND USAGE

ROGAINE is indicated for treatment of androgenetic alopecia, expressed in men as male pattern baldness of the vertex and in females as diffuse hair loss or thinning of the frontoparietal areas. At least 4 months of twice daily applications are necessary before evidence of hair growth can be expected.

CONTRAINDICATIONS

Hypersensitivity to minoxidil, propylene glycol, or ethanol.

WARNINGS

1. **Need for normal scalp:** Before starting treatment, make sure that the patient has a normal, healthy scalp. Local abrasion or dermatitis may increase absorption and hence the risk of side effects.

2. **Potential adverse effects:** Although extensive use of topical minoxidil has not revealed evidence that enough minoxidil is absorbed to have systemic effects, greater absorption because of misuse, individual variability, or unusual sensitivity could, at least theoretically, produce a systemic effect.

Experience with oral minoxidil has shown the following major cardiovascular effects (Review the package insert for LONITEN® Tablets for details.):

- salt and water retention, generalized and local edema
- pericardial effusion, pericarditis, tamponade
- tachycardia
- increased incidence of angina or new onset of angina

Patients with underlying heart disease, including coronary artery disease and congestive heart failure, would be at particular risk of these potential effects. Additive effects could also emerge in patients being treated for hypertension.

Potential patients should have a history and physical and should be advised of potential risks. A risk/benefit decision should be made. Heart patients should realize that adverse effects may be especially serious.

Alert patients to the possibility of tachycardia and fluid retention and monitor for increased heart rate, weight gain, or other systemic effects.

PRECAUTIONS

General Precautions: Monitor patients 1 month after starting ROGAINE and at least every 6 months thereafter. Discontinue ROGAINE if systemic effects occur.

The alcohol base will burn and irritate the eye. If ROGAINE reaches sensitive surfaces (eg, eyes, abraded skin, and mucous membranes), bathe with copious cool water.

Avoid inhaling the spray.

Do not use in conjunction with other topical agents, such as corticosteroids, retinoids and petrolatum, or agents that enhance percutaneous absorption.

ROGAINE is for topical use only. Each mL contains 20 mg minoxidil, and accidental ingestion could cause adverse systemic effects.

Decreased integrity of the epidermal barrier caused by inflammation or disease of the skin, eg, excoriations, psoriasis, or severe sunburn, may increase minoxidil absorption.

Patient Information: A patient information leaflet is included with each package and in the full product information.

Drug Interactions: No drug interactions are known. Theoretically, absorbed minoxidil may potentiate orthostatic hypotension in patients taking guanethidine.

Carcinogenesis, Mutagenesis, and Impairment of Fertility: No carcinogenicity was found with topical application. Oral administration may be associated with an increased incidence of malignant lymphomas in female mice and hepatic nodules in male mice. In rats, there was a dose-dependent reduction in conception rate.

Pregnancy Category C: ROGAINE should not be used by pregnant women.

Labor and Delivery: The effects are not known.

Nursing Mothers: ROGAINE should not be administered to nursing mothers.

Pediatric Use: Safety and effectiveness has not been established for patients under age 18.

Postmenopausal Use: Efficacy in postmenopausal women has not been studied.

ADVERSE REACTIONS

ROGAINE was used by 3,857 patients (347 females) in placebo-controlled trials. Except for dermatologic events, no individual reaction or reactions grouped by body systems appeared to be increased in the minoxidil-treated patients.

Dermatologic: irritant or allergic contact dermatitis — 7.36%; **Respiratory:** bronchitis, upper respiratory infection, sinusitis — 7.16%; **Gastrointestinal:** diarrhea, nausea, vomiting — 4.33%; **Neurologic:** headache, dizziness, faintness, light-headedness — 3.42%; **Musculoskeletal:** fractures, back pain, tendinitis — 2.59%; **Cardiovascular:** edema, chest pain, blood pressure increases/decreases, palpitations, pulse rate increases/decreases — 1.53%; **Allergic:** nonspecific allergic reactions, hives, allergic rhinitis, facial swelling, sensitivity — 1.27%; **Metabolic-Nutritional:** edema, weight gain — 1.24%; **Special Senses:** conjunctivitis, ear infections, vertigo — 1.17%; **Genital Tract:** prostatitis, epididymitis, vaginitis, vulvitis, vaginal discharge/itching — 0.91%; **Urinary Tract:** urinary tract infections, renal calculi, urethritis — 0.93%; **Endocrine:** 0.47%; **Psychiatric:** anxiety, depression, fatigue — 0.36%; **Hematologic:** lymphadenopathy, thrombocytopenia — 0.31%.

Patients have been followed for up to 5 years, and there has been no change in incidence or severity of reported reactions. Additional events have been reported since marketing and include eczema; hypertrichosis; local erythema; pruritus; dry skin/scalp flaking; sexual dysfunction; visual disturbances, including decreased visual acuity; exacerbation of hair loss; and alopecia.

DOSE AND ADMINISTRATION

Hair and scalp should be dry before application. 1 mL should be applied to the total affected areas twice daily. Total daily dose should not exceed 2 mL. If the fingertips are used to facilitate drug application, wash the hands afterwards. If hair regrowth is realized, maintenance of twice daily applications is necessary for additional and continued hair regrowth.

Consider a few features of **The Western Journal of Medicine:**

• Epitomes—Important Advances in Clinical Medicine

Each month this selection highlights the major advances in a different specialty with 15 or 20 brief epitomes by experts in the field.

• Biomedical Science

Five major clinical research societies coordinate important new research findings, emphasizing clinical value.

• Socioeconomics

WJM is often the first to predict, examine, and evaluate socioeconomic changes and trends.

• Yearly Special Issue

Each devoted to a topic vital to physicians: cross-cultural medicine (1983), AIDS—a global perspective (1987), women and medicine (1988), addiction medicine and the primary care physician (1990), rehabilitation medicine: adding life to years (1991), cross-cultural medicine—a decade later (1992).

YOCON[®] YOHIMBINE HCl

Description: Yohimbine is a 3a-15a-20B-17a-hydroxy Yohimbine-16a-carboxylic acid methyl ester. The alkaloid is found in Rubiaceae and related trees. Also in Rauwolfia Serpentina (L) Benth. Yohimbine is an indolalkylamine alkaloid with chemical similarity to reserpine. It is a crystalline powder, odorless. Each compressed tablet contains (1/12 gr.) 5.4 mg of Yohimbine Hydrochloride.

Action: Yohimbine blocks presynaptic alpha-2 adrenergic receptors. Its action on peripheral blood vessels resembles that of reserpine, though it is weaker and of short duration. Yohimbine's peripheral autonomic nervous system effect is to increase parasympathetic (cholinergic) and decrease sympathetic (adrenergic) activity. It is to be noted that in male sexual performance, erection is linked to cholinergic activity and to alpha-2 adrenergic blockade which may theoretically result in increased penile inflow, decreased penile outflow or both.

Yohimbine exerts a stimulating action on the mood and may increase anxiety. Such actions have not been adequately studied or related to dosage although they appear to require high doses of the drug. Yohimbine has a mild anti-diuretic action, probably via stimulation of hypothalamic centers and release of posterior pituitary hormone.

Reportedly, Yohimbine exerts no significant influence on cardiac stimulation and other effects mediated by B-adrenergic receptors, its effect on blood pressure, if any, would be to lower it; however no adequate studies are at hand to quantitate this effect in terms of Yohimbine dosage.

Indications: Yocon[®] is indicated as a sympatholytic and mydriatic. It may have activity as an aphrodisiac.

Contraindications: Renal diseases, and patient's sensitive to the drug. In view of the limited and inadequate information at hand, no precise tabulation can be offered of additional contraindications.

Warning: Generally, this drug is not proposed for use in females and certainly must not be used during pregnancy. Neither is this drug proposed for use in pediatric, geriatric or cardio-renal patients with gastric or duodenal ulcer history. Nor should it be used in conjunction with mood-modifying drugs such as antidepressants, or in psychiatric patients in general.

Adverse Reactions: Yohimbine readily penetrates the (CNS) and produces a complex pattern of responses in lower doses than required to produce peripheral a-adrenergic blockade. These include, anti-diuresis, a general picture of central excitation including elevation of blood pressure and heart rate, increased motor activity, irritability and tremor. Sweating, nausea and vomiting are common after parenteral administration of the drug.^{1,2} Also dizziness, headache, skin flushing reported when used orally.^{1,3}

Dosage and Administration: Experimental dosage reported in treatment of erectile impotence.^{1,3,4} 1 tablet (5.4 mg) 3 times a day, to adult males taken orally. Occasional side effects reported with this dosage are nausea, dizziness or nervousness. In the event of side effects dosage to be reduced to 1/2 tablet 3 times a day, followed by gradual increases to 1 tablet 3 times a day. Reported therapy not more than 10 weeks.³

How Supplied: Oral tablets of YOCON[®] 1/12 gr. 5.4mg in bottles of 100's NDC 53159-001-01, 1000's NDC 53159-001-10 and Blister-Paks of 30's NDC 53159-001-30
